Ezio Talk Token

Accessible eBanking Services for All

> Versatile OTP device for strong authentication and transaction signing
> Designed to be convenient for people who cannot easily use small devices for eBanking operations
> Speech capabilities
Digital banking services for all
Banks and financial institutions play an important role in societies by enabling access to digital banking services as well as facilitating self-sufficiency. Access to banking services for everyone is a necessity at an individual level, and not simply at the household or community level. Estimates suggest that by 2020, twenty percent of the population of the industrialized world will be above 65 years of age* which fairly means that banking services that are easily accessible today should accompany the ageing population in the future.

A bank that understands the need for improved accessibility for customers who have difficulties using small devices, the elderly and the visually impaired for example, will strive to ensure a more user friendly experience for all its consumers, with disabilities or not.

Secure eBanking with Ezio Talk Token
Ezio Talk Token is not just eBanking at your customers’ fingertips, it is also banking within their earshot.

It is a versatile One-Time-Password (OTP) token device, used for strong authentication and transaction signing, carefully designed to be convenient for people who cannot easily use small devices. It is equipped with a large LCD screen, and a keyboard with large keys. Thanks to its speech capability, it allows visually-impaired people to perform eBanking operations. The Ezio Talk Token is a stand-alone device that can be used with a single hand and is well suited for securing eBanking and eCommerce transactions, where it is vital to authenticate the user or approve transaction details.

Adding this device into a bank’s security framework means better bank brand value, reduced total cost of ownership as well as better service and improved security for customers.

Part of the Ezio Suite
Ezio Talk Token improves accessibility of your eBanking services all while leveraging security. As part of Gemalto’s versatile Ezio Suite, this device fits perfectly in any bank’s security model. It can easily be accompanied by your choice of complementary products and/or services.

ABOUT GEMALTO

Gemalto (Euronext NL0000400653 GTO) is the world leader in digital security, with 2014 annual revenues of €2.5 billion and blue-chip customers in over 180 countries.

Gemalto helps people trust one another in an increasingly connected digital world. Billions of people want better lifestyles, smarter living environments, and the freedom to communicate, shop, travel, bank, entertain and work—anytime, everywhere—in ways that are enjoyable and safe. In this fast moving mobile and digital environment, we enable companies and administrations to offer a wide range of trusted and convenient services by securing financial transactions, mobile services, public and private clouds, eHealthcare systems, access to eGovernment services, the Internet and internet-of-things and transport ticketing systems.

Gemalto’s unique technology portfolio—from advanced cryptographic software embedded in a variety of familiar objects, to highly robust and scalable back-office platforms for authentication, encryption and digital credential management—is delivered by our world-class service teams. Our 14,000 employees operate out of 99 offices, 34 personalization and data centers, and 24 research and software development centers located in 46 countries.
