Cyber attack and identity theft continue to increase and become more sophisticated as businesses harness the power of online services for business applications. To counteract this threat, many enterprises, financial institutions and government agencies have deployed strong authentication using smart card technology to provide safe logical access, protect digital identities and secure online transactions of their employees, customers and citizens at large.

Smart card readers are an essential component of any smart card deployment. Connected to a PC, laptop or thin client, they ensure communication between the smart card and network services, and must do so in a convenient yet secure manner. Gemalto’s full range of PC-Link smart card readers provide the perfect balance of ease of use combined with the highest level of security. Purpose designed to be compatible with any corporate PC and any level of user.

Based on Gemalto’s own PC-Core smart card reader hardware and firmware technology, Gemalto’s PC-Link readers employ over 30 years of security and cryptography research and development to deliver a range of products that are reliable, versatile and compliant with relevant standards and certifications for each industry.

The PC-Link portfolio of products includes readers for desktops, laptops, and PIN pads for secure PIN entry. This ensures the maximum flexibility for any use case or business environment. Customization is available for both readers and packaging to align with corporate branding (i.e., logo, company colors, etc.).

Gemalto’s global manufacturing footprint supports any volume of product or global distribution. For standard products, the Gemalto web store provides convenient access to small batch orders and quick delivery.

Our offer:

> **IDBridge CT30**
The innovative transparent design of the IDBridge CT30 highlights the card with your graphics. A flexible deployment solution with maximum user-friendliness, the IDBridge CT30 is compact and lightweight to optimize shipping expenses and offers a cost effective solution to all your smart card reader needs.

The IDBridge CT30 is modular in concept, and several easy-to-use and easy-to-install accessories are available, including a stand for desktop use (vertical insertion) and floppy disk tray to convert the reader to an internal device to be installed in a PC Floppy Disk or CD-ROM bay.

> **IDBridge CT40**
The IDBridge CT40 offers all of Gemalto’s technical know-how in a slim-line and tamper-evident casing. Its housing is ideal for customization to your corporate identity and it offers a simple and secure solution with a modern and sleek design.

> **IDBridge CT70**
The IDBridge CT70 is an ergonomically designed Class 2 reader (Secure Pin Entry) featuring one hand card insertion. Perfect for corporate, administrative, eCommerce and eBanking services that require an extra layer of security, the IDBridge CT70 integrates a tactile 16 key keypad, a 2x16 line display and a USB interface. It exists in a desktop and portable form factor.

> **IDBridge K30**
Gemalto’s IDBridge K30 is a USB-connected plug-in format reader that offers all the power of a smart card reader with maximum portability. Small enough to carry on a key ring but smart enough to be secure, the IDBridge K30 is the ideal solution for users requiring security and portability.

> **IDBridge CT510**
IDBridge CT510 is a lightweight device for laptop computers or PDAs that is ideal for security applications on the move. With a robust metal casing in a full ExpressCard 54 format, the IDBridge CT510 is a handy and compact solution.

**Key Benefits:**
- Easy to Install – plug and play
