The new national biometric electronic ID card of the People’s Democratic Republic of Algeria

Holographic optical element
- Strong protection against copy or portrait substitution

High security printing
- Printed card background with advanced features and special inks

National identification number (NIN)
- Printed and also stored within the micro-processor

Travel document
- The eID is also an ICAO-compliant travel document

Biometrics
- Two fingerprints securely stored in the micro-processor

Polycarbonate card body
- More durable, secure and temper-resistant card body
- Laser-engraving provides maximum protection against data manipulation and forgery

E-Government
- Electronic certificates for authentication and electronic signature

Advanced security feature
- Strong visible security feature (Sealys Window)
- A transparent window created inside the card: hard to copy and easy to check
