Let's talk tokenization for mobile payment security

Mobile payment technology introduces many benefits. Because more cards are lost or stolen each year than ever before, there is a need for secure payment methods. Credit and debit cards carry a 16-digit PAN (Primary Account Number) and a 4-digit expiry date. But these numbers are the world, they are very valuable –

THE MOBILE PAYMENTS REVOLUTION

Why everyone's talking tokenization

Payments are the lifeblood of any organization. Limiting the use of personal data in payment transactions is required by evolving legislation. In recent years, the number of identity theft cases and fraudulent transactions have risen.
