# Allynis Connect - Gemalto Data Exchange System

High security, reliable communication infrastructure and wide compatibility with the latest IT standards and transfer software

One of your business' most vital assets is the data your cardholders entrust to you.

Protecting various data such as magnetic stripe information, cardholder picture, PAN, IMSI, etc... is key to the success of your card issuance strategy. Allynis Connect has been specifically engineered to connect our customers to the Gemalto Allynis Offer including card personalization facilities, Gemalto data centers and third party service suppliers.

## Fully compliant with VISA/MC/AMEX/JCB regulations

The architecture design integrates all mandatory features needed to be compliant with regulations offices.

## End-to-end security, worldwide

The Allynis Connect solution will guarantee a secured backbone for complex projects where many stakeholders are involved. Thanks to this worldwide end-to-end solution, data exchange is easy, reliable and secured.

## Strength dependability & 24/7 System monitoring

A dedicated team monitors the whole system 24/7, tackles troubleshooting immediately and applies escalation process if need be.

## Scalable, fully integrated, completely flexible

Allynis Connect supports all industry-standard transfer tools, giving you the option of using your existing software or

selecting a specific solution depending on your needs, the solution is scalable and always up to date with industry proven protocols.

## Protocols supported by Gemalto

Allynis Connect supports most of existing protocols with associated security layer.

> **Web protocols** (Http and Ftp) with transport encryption protocols such as SSL/TLS are fully supported. FTP protocols can be used as server or client mode.

Moreover, these protocols are quite easy to setup and used with standard software.

> **Email/PGP™ protocol** allows exchange of files as encrypted and signed email attachments.

> **Connect Direct™ and Pesit** offer strong mutual authentication, conformance to all security policies.

These high-end solutions are particularly well adapted in high traffic conditions.

## Traceability

Transfer activity can be tracked and reported back to your information system in different ways:

- > Traffic report service through email
- > Online history over web portal
- > Reports downloading

Allynis Connect is your guarantee of a secure, reliable, and flexible data management solution.
