Ezio Thin

||||| The stylish way to secure eBanking and eCommerce with your payment card

From your perspective

You want to safeguard your customers when banking and shopping online. That means finding a solution that is not only secure but also easy to implement, smoothly adopted by your customers and that you can trust to carry a positive image of your brand.

Ezio Thin is a highly portable smart card reader using the bank card to authenticate and sign transactions

How it works

To login to your accounts:

1. Simply insert your bank card into the card slot
2. Select the login function key
3. Enter your PIN and the reader displays a one-time password (OTP)
4. The authentication server at the bank validates the OTP and allows access.

Ezio Thin can also generate OTPs for login or transactions based on challenges or transaction specific data.

Innovative design

Ezio Thin is designed to fit in a wallet along with the bank card. It brings total freedom to bank and shop online anywhere. This design allows for full customization of the front panel, making it perfect for conveying your brand or customize in accordance with customer segmentation strategies.

Part of the Ezio suite

Ezio Thin offers a great balance between security, convenience and total cost of ownership for banks that are already deploying chip-enabled banking cards based on the EMV/CAP standard.

As part of Gemalto's versatile Ezio Suite, the device fits perfectly in any bank's security infrastructure. It can easily

- Unconnected smart card reader
- Credit card sized, fits in a wallet
- Ultra Light and portable
- Advanced customization for customer segmentation

be accompanied by your choice of complementary products and/or services.
