# Ezio corporate e-banking offer

||||| A complete solution suite, based on field proven products and technologies, to secure and ease the deployment of online corporate banking

## Enterprises' finance goes online

Banks now offer a wide array of online corporate banking services, such as asset finance, trade and transactional services, foreign exchange, cash management, tax payment. Providing such a large service portfolio increases customers' loyalty and reduces the churn rate.

## All about trust

Online, it is vital to ensure a complete framework of trust: trust about the exchanged data, the people's identity and rights associated to it. Authentication, transaction signature and non repudiation are at the heart of the process. No less important, the user experience has to be eased, to foster the adoption pace.

## Authentication & signature

Gemalto has developed unconnected and connected solutions, granting access through a secure device.

> **PKI-based connected mode:** user's digital certificates are loaded on a smart card or a USB token, with cryptographic software and signature application. He authenticates himself and signs transactions and documents, smoothly, only having to plug his authentication device to his computer, clicking onto the appropriate web buttons and typing his PIN code.

## Corporate e-banking

- > From authentication to transaction and document signature
- > Brings non-repudiation to transactions
- > Ease of use
- > Worldwide field- proven deployments

> **Unconnected solution,** the user reads the One-Time-Password (OTP) given by his token, and retypes it onto the web application.

## Adaptation to customer's profiles

According to their needs and profiles, Enterprises might favor different solutions. Unconnected solutions, reduce IT

integration, while PKI solutions offer high level of security and paperless business framework. Gemalto can ease transition phase from one solution to another when requested.

## Complete suite

> **OTP solutions:** Gemalto offers an end-to-end solution with server, tokens and card readers, with high market success, as well as professional services for the implementation phase. Gemalto's solution encompasses the most standardized and deployed OTP methods.

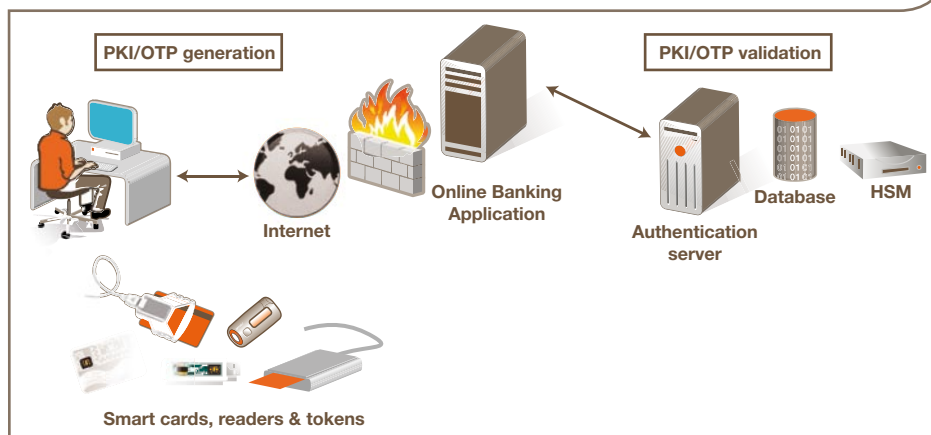

> **PKI-based solutions:** Gemalto brings a complete client offer, including smart cards, card readers, USB tokens, middleware, signature client software, and professional services. This offer interfaces easily with the existing PKI infrastructure of the bank. It is a field-proven solution daily used by thousands satisfied companies.

## Key benefits for banks

- > Risks reduction on large financial transactions
- > Non-repudiation framework implementation
- > Secure exchanges from customer's level
- > Complete offer allowing smooth migration between solutions when needed

## Key benefits for enterprises

- > Secured access at individual level
- > Clear tracking of all operations
- > Document and transaction signature
- > Easy to use
