

Gemalto UXP Editor

||||| An intuitive user interface for card specifications

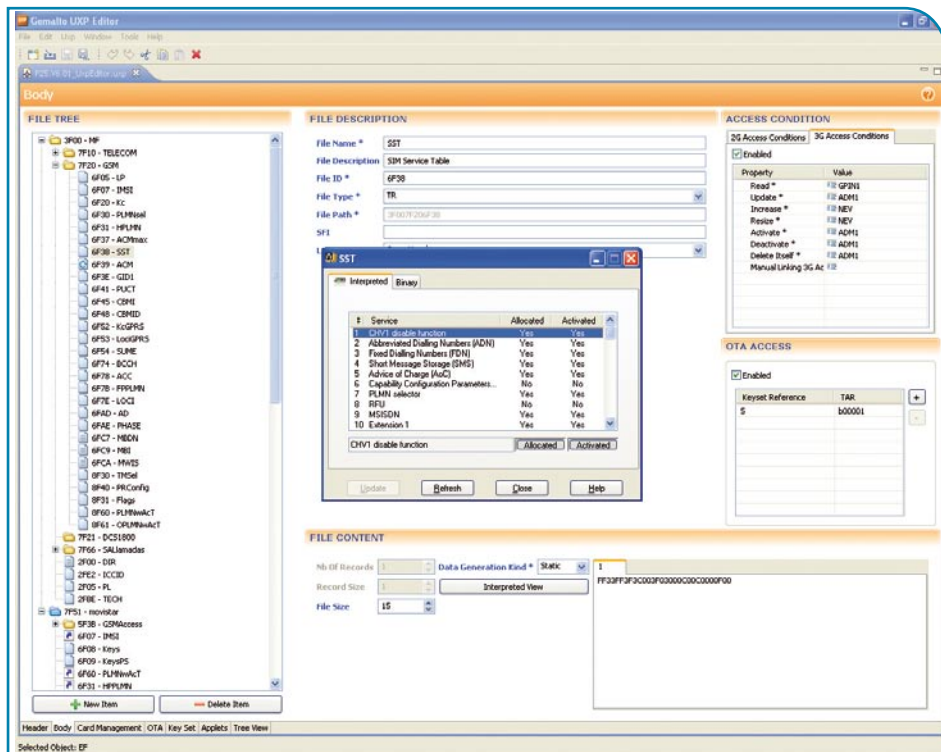

TELECOMMUNICATIONS > SOLUTION

The current telecom environment is constantly evolving, and with this comes more and more complexity. Defining card profiles has become complicated with no one particular format used. This lack of coherence makes it difficult for Network Operators to specify and share card profiles.

To rectify this, the industry requires a unique format of document to simplify the definition of card specifications. Card vendors and network operators have got together to define a unified XML format called (U)SIM XML Profile, otherwise known as UXP. This makes it easier to define the file system content, card manager parameters, OTA parameters, secret codes, applets, etc. The advantages are two-fold: save time while minimizing human interaction.

The Gemalto UXP editor provides a simple and intuitive user interface for creating and editing a (U)SIM XML Profile (UXP) specification.

Gemalto UXP Editor

||||| An intuitive user interface for card specifications

The table below shows the different functionalities available with Gemalto UXP Editor.

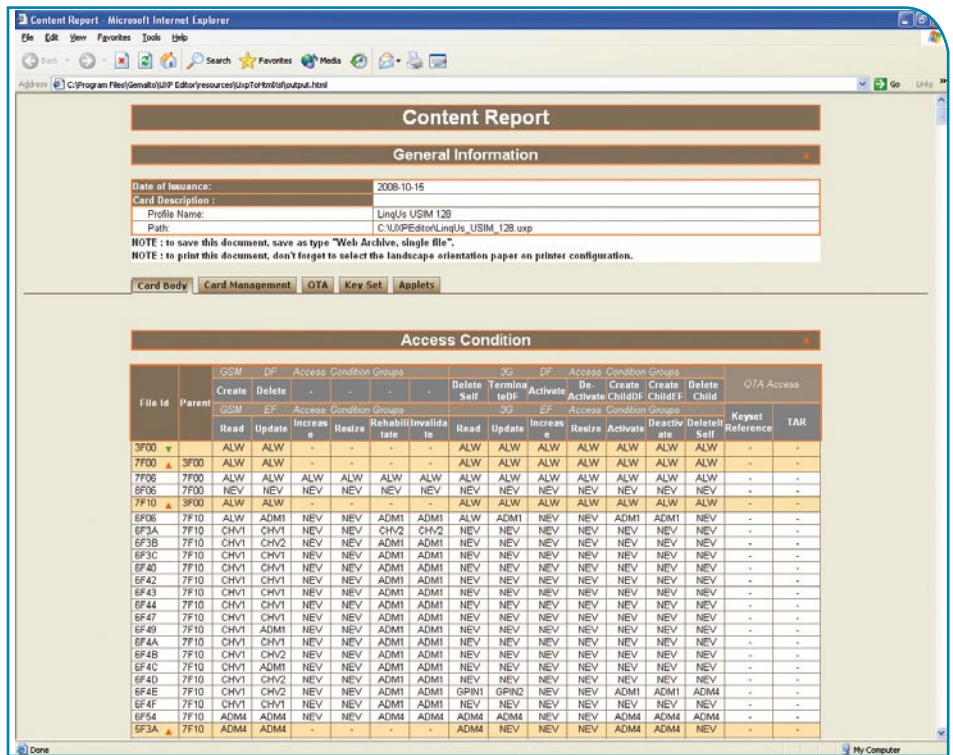

Basic functionalities	Advanced functionalities *
<ul style="list-style-type: none"> > Create a new UXP specification > Create a UXP specification from an existing card profile (Card Admin format) > Edit a UXP specification > Check a UXP specification with the UXP constraints 	<ul style="list-style-type: none"> > Access EF (Elementary File) content interpreted views > Generate an HTML specification report > Compare two UXP specifications > Check a UXP specification with a telecom standard

* The advanced features are available only if Gemalto's Telecom Card Admin is installed and the license granted

Benefits

- > Specify and share easily your card profile specification
- > Easy and safe profile modification
- > By minimizing human interaction, it reduces failure rates and test loops
- > A single specification that can be addressed to any Card Vendor.

The Gemalto UXP Editor includes a detailed User Guide.
