Gemalto: world leader in digital security

We help people to trust one another in an increasingly connected world.

10.800 employees worldwide
950 patents and patent applications

What do we do?

We create an identity for our customers from the very start. To make transactions secure, we need to manage the digital identity of each person or organization that wants to participate in a transaction. At Gemalto, we have been working in this area since the mid-80s. Our products and services touch the lives of billions of people every day.

How do we do it?

We make it possible for people to be confident and safe in a digital world. To do this, we work closely with our customers to develop solutions that are secure, efficient, and convenient. From secure identity solutions to advanced authentication methods, we help our customers to secure their digital assets and transactions.

Trusted by many of the world’s best known companies and governments to secure their digital services

Innovative and convenient digital services. Everywhere.

Securing mobile payment in Taiwan

Gemalto works closely with financial firms to secure online transactions. In Taiwan, to help mobile phone users access mobile billing services, Gemalto provides them with a trusted digital identity that lets them use their mobile phones to make payments. This makes the process safer and more convenient.

Supporting the development of national identity in South Africa

The rolling out of the National Identity System (NIS) in South Africa is the largest identity project in the world. Gemalto provides the technology for the NIS, including biometric capture devices, issuance and management of the national identity cards, and the safekeeping of the personal information that is stored on them.

Your development is our commitment

Fresh graduates are welcome to join our campus recruitment or internship programs. Start your professional journey in the best possible way – with Gemalto.
