

Gemalto Explains Personal Security Device

A family of devices...

...all work with a common server.

How it works

Personal security device

Smart card-based adaptors add flexibility to two-factor authentication

Multiple applications:

- Digital signatures that cannot be repudiated— a specific version of a document can be signed with a verified audit trail.
- Stores multiple identities (e.g., personal, business) and lets the user choose.
- Email and document encryption that one takes with them— it is not left in the computer.
- Store multiple logins and passwords for many sites.
