Training Website

Having an **Over The Air (OTA)** platform, is your gateway as a Telecom Operator, for supplying Value Added Services (VAS) to your many existing subscribers and also gaining new ones.

Keeping your OTA **system running at its optimum performance level** is a must. With downtime and system hang ups always being a major concern, what is needed is a course on administration principles and to give **practical advice on the OTA platform.**

At the end of the training you will

- > Control and Manage the multiple users on the platform
- > Administrate & maintain a fully functional OTA platform.
- > Manage billing facilities.
- > Have an overview on the card provisioning.

Who should attend

- > System Administrators
- > SIM Managers
- > Telecom Operators
- > Customer Service Managers

Pre-requisites:

- > Unix
- > GSM SIM Card Structure
- > ETSI & GSM Standards

This course is held in English
