Reinforce security for online financial services and ensure smooth user experience while complying with regulations.

The evolution towards digital banking and the extension of banking and payment channels open up new revenue paths and service channels for banks. Gemalto’s Ezio for eBanking and eCommerce help banks take advantage of this digital transformation by ensuring customer trust and regulatory compliance. By offering frictionless and convenient strong authentication combined with risk management, Gemalto’s eBanking solutions protect online banking customers from external attacks and guarantee an ideal balance between a user-friendly, and secure online experience.

**Improve convenience**
Consumers are becoming more demanding when banking and shopping online. They expect instantaneity and increased mobility. Banks need to implement a smooth and convenient user experience in order to maintain customer relationship and secure customer loyalty.

**Increase security**
Cyber-attacks target every level of the banking ecosystem. The number of attacks against banks rises daily, and their level of sophistication increases. To counter this threat, banks need to protect access to user accounts while ensuring simplicity for their customers.

**Comply with regulations**
In order for banks to meet evolving security and privacy regulations they need to work with a trusted partner who can provide stability and technological innovation for the long term.
