Introducing PURE, a EMV white label offer for domestic schemes and private label cards network

More than 90% of all card payment transactions in most countries are domestic, and domestic payment schemes have long been the preferred solution for such in-country payments. National schemes are increasingly looking for solutions to maximize transactions, explore new payment solutions while keeping control and full governance on their local payment eco-system.

PURE, an interoperable and fully EMV compliant white-label payment application from Thales, can help put these domestic schemes in control, even when expanding to contactless and mobile.

Why PURE?

Domestic payment schemes are often a better alternative to international schemes due to lower cost, better local innovation and governance benefits for local transactions. Private networks (such as fuel retailers) meanwhile need solutions like PURE to create a more compelling multi-channel customer proposition.
