

FLY TO GATE

AN END-TO-END, FAST & SECURE
SELF-SERVICE SOLUTION

“Fly to Gate” is opening the door to an integrated self-service solution to maximize airport efficiency & traveler comfort, while ensuring highest levels of security and compliance to immigration requirements. “Fly to Gate” allows for an end-to-end as well as for a modular approach to passenger facilitation through automation and self-service.

ENABLING SPEED AND SECURITY AT EVERY PASSENGER TOUCHPOINT

A growing air traffic and a fast increasing number of travelers are generating strong industry demand for self-service and automation at every step of the passenger journey. An increasing number of airports are investing in modern solutions to define the next generation solution at airport security checkpoints that combine strengthened security with greater operational efficiency and enhanced passenger experience.

IER and Gemalto are joining forces to deliver integrated biometrics enabled solutions to the airports and airlines market. Our respective expertise's and proven leadership in the airline self-service & digital security areas enable us to offer a compelling, end-to-end solution for traveler facilitation.

Our joint vision is to demonstrate how the combination of strong document and identity verification leveraging the use of biometrics can considerably enhance the passenger journey throughout the airport, while increasing security. Our ambition is to combine our assets to revolutionize the airport experience.

KEY BENEFITS

PASSENGER SPEED & CONVENIENCE

- A user-friendly experience for travelers at every step of their journey, from check-in, to bag drop, security screening and boarding
- Passengers benefit from a frictionless and accelerated journey through the airport, they are able to “Fly to Gate”
- The waiting times are reduced, leaving more time to passengers to benefit from the airports shopping and leisure facilities.

INTEGRATED BORDER MANAGEMENT SOLUTION

- Integrated solution to maximize benefits in airport operations & border management
- Secure integration to existing airport/airline/immigration systems
- Best in class and robust hardware components for process automation coupled with solution maintenance
- Industry leading biometric capture, biometric matching and document verification software components

SECURE PASSENGER PROCESSING & TRAVELER AUTHENTICATION

- State of the art software solutions with fast and reliable verification of travel documents as passports & visas
- Using biometry as a single identifier enabling passenger to fly through the airport right to the boarding gate

HOW IT WORKS

Whether the passenger decides to check-in and perform ID check from home online or at a kiosk at the airport, a token is created at check-in by matching identity data (from passport) to travel data (boarding pass). His token ID can then be used as a unique identifier to fly through all airport touch points, eliminating the need to present several documents at the various check points (biometric bag drop, security check point, border control & boarding).
