What is a Digital ID Wallet?

Digital ID Wallet is a service gateway to real-time generation of digital identity services, credentials, privacy and Government-to-Citizen (G2C) engagement.

Benefits of a Digital ID Wallet

1. Taking Citizens’ Privacy to New Heights
   - Each digital document is segregated from the others, no data leakage
   - Citizens control which data to share & who to share it with
   - Data sharing is always based on user consent
   - Data is encrypted

2. An Array of À-La-Carte ID Services for a Frictionless User Experience
   - Digital Signature: Enables citizens to sign forms and contracts digitally and remotely
   - Secure access to online services: Facilitates and secures access to online services that require proof of identity
   - Identity Proofing: Citizens can prove who they are, anytime and anywhere, either online or in person
   - ID attribute sharing: Citizens can share those ID attributes they choose, such as their age or place of residence, without having to reveal all their personal information

3. Bringing Governments and Citizens Closer Together
   - Your phone is always with you: In fact, people are more likely to notice they forgot their phone than their wallet.
   - A single Digital ID Wallet for all documents: All your official digital ID documents are in one place, no need to have an app per service provider.
   - Electronic signature required

4. Convenient

5. Secure
   - Data accuracy
   - Data encryption
   - Secure access to online services
   - Over-threshold validation
   - Data sharing
