Gemalto IoT Newsletter

May 2017

The Evolving Energy Ecosystem

Energy is evolving. From electric vehicles to solar power installations to the "Uberization" of energy production, the Internet of Things is an integral part of our march to the future. Trusted IoT solutions enable homeowners and service providers to leverage on distributed energy resources. Data and remote access to measurement are mandatory to create new commercial opportunities for a variety of stakeholders in the energy ecosystem.

For a deeper dive on the issue, we recently published an article this month in PowerGrid International – elaborating on the opportunities that are "in" for all of us when combining decentralized energy management with IoT solutions and smart contract settlement via Blockchains. To learn more about what's needed to realize a more flexible, smarter infrastructure, contact me or a Gemalto representative for a consultation.

Best regards,

Thomas Weisshaupt
Director Markets Smart Energy and IoT

Gemalto eSE secures Samsung Galaxy S8 plus a lot more!

Samsung is using Gemalto's embedded Secure Element (eSE) in a suite of new smartphones including the flagship Galaxy S8 providing an added layer of security for Samsung Pay, mobile ticketing solution and other consumer IoT applications.
