Aerotel and Cinterion Win 2011 Connected World Gold Value Chain Award in Home Health Category

MUNICH, GERMANY – July 8, 2011 – Aerotel Medical Systems, a leading global supplier of advanced [remote monitoring solutions](#) for telehealth and telecare, and its partner Cinterion, the global leader in cellular [machine-to-machine](#) (M2M) communication and a Gemalto (Euronext NL 0000400653 GTO) company, announce winning the Connected World Magazine's prestigious gold Value Chain Award in the home health category for Aerotel's e-CliniQ™ system and the Connect-CELL™ telehealth homecare hub. Connected World Magazine's Value Chain Awards honor the most successful corporate adopters of M2M technology and the solution providers that make their success possible.

The Aerotel Connect-CELL hub is intended for home-based chronic disease management applications. It automatically collects data from Bluetooth®-enabled medical sensing devices as well as wired devices and uses a Cinterion M2M module to securely send data over cellular networks to a health monitoring center. Authorized doctors and clinicians can log in at anytime and from anywhere in the world to access health measurements and determine treatment approaches.

"Aerotel and its partner Cinterion were honored for using M2M technology to enhance quality of life for patients with chronic conditions by increasing access to doctors and care givers," said Peggy Smedley, editorial director and publisher of Connected World. *"Connect-CELL helps cut costs while improving quality of care and it also highlights the transformative power of M2M technology in solving global healthcare challenges."*

"Aerotel's Connect-CELL homecare hub uses the latest Cinterion M2M technology to address the urgent need for solutions that reduce spending while improving quality of service for the growing ageing population," commented Norbert Muhrer, CEO of Cinterion. *"The use of Connect-CELL has already proven to reduce hospitalization costs by up to 30 percent."*

"The Connect-CELL hub is part of Aerotel's e-CliniQ system, which is one of the most cost-effective home telehealth solutions available today with proven clinical and economical benefits," said Ofer Atzmon, Aerotel Medical Systems vice president for business development and marketing. *"With Connect-CELL, caregivers can remotely see when a patient is in trouble and respond immediately for increased peace of mind and convenience."*

Connect-CELL™ and e-CliniQ™ are registered trademarks of Aerotel Medical Systems. All other trademarks are the properties of their respective owners.

About Gemalto

Gemalto (Euronext NL0000400653 GTO) is the world leader in digital security with 2010 annual revenues of €1.9 billion and over 10,000 employees operating out of 87 offices and 13 Research & Development centers in 45 countries.

Gemalto is at the heart of our evolving digital society. Billions of people worldwide increasingly want the freedom to communicate, travel, shop, bank, entertain, and work—anytime, anywhere, in ways that are convenient, enjoyable and secure. Gemalto delivers on the growing demands for personal mobile services, identity protection, payment security, authenticated online services, cloud computing access, modern transportation, e-healthcare and e-government services. Gemalto does this by providing secure software, a wide range of secure personal devices, and managed services to wireless operators, banks, enterprises and government agencies.

Gemalto is the world leader for electronic passports and identity cards, two-factor authentication devices for online protection, smart credit/debit and contactless payment cards, as well as subscriber identification modules (SIM) and universal integrated circuit cards (UICC) in mobile phones. Also, in the emerging machine-to-machine applications Gemalto is a leading supplier of wireless modules and machine identification modules (MIM). To operate these solutions and remotely manage the software and confidential data contained in the secure devices Gemalto also provides server platforms, consulting, training, and managed services to help its customers achieve their goals.

As the use of Gemalto's software and secure devices increases with the number of people interacting in the digital and wireless world, the Company is poised to thrive over the coming years.
